

LPD 6K Series Advantage

Prysm Systems Laser Phosphor Display (LPD) 6K series is the world's largest single panel display that can deliver an uncompromising experience across virtually any application or commercial use case.

6K resolution

Aided by a high contrast ratio from light to dark colors at an incomparable 6K resolution, the LPD platform allows you to brilliantly show off your content.

No bezels, no compromises

Stop settling for distracting seams that take away from the viewing experience or make it difficult for teams to interact with and manipulate content due to large bezels that interfere with touch.

Fully interactive

A robust, polymer surface handles the daily interaction that will come with the LPD 6K series, capable of tracking up to 32 simultaneous touch points for group participation.

Green energy design

The LPD 6K series is Prysm Systems most environmentally-friendly solution. Using less power than a commercial coffee maker, the 6K series can save you thousands of dollars annually.

Front service for flexible deployment

With front-service design, the LPD 6K series gives you greater freedom to dictate where the display will be, as it can be installed in more spaces with less down time.
